

Operational Vapor Decontamination Kit (VDK)

FG015-0006-00NA

FASTACT®

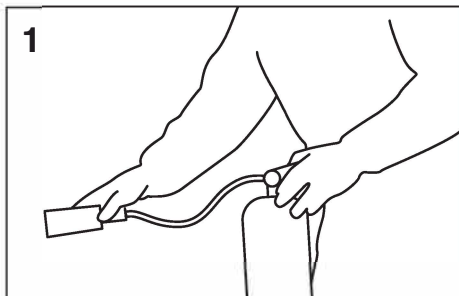

Includes:
1x FAST-ACT 4-Kg Pressurized Cylinder
1x Attachment Hose
1x Cylinder Backpack

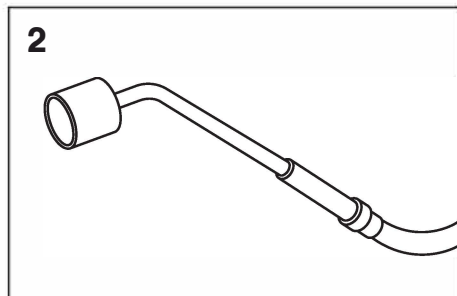

FAST-ACT® Operational Vapor Decontamination Kit:

The kit is designed to perform operational, emergency, and/or technical decontamination in air spaces, likely enclosed spaces.

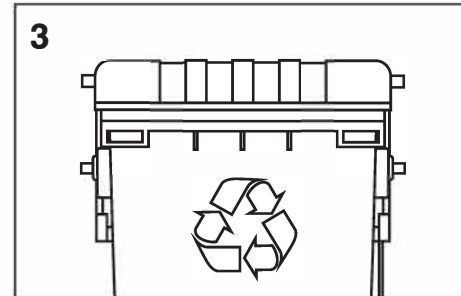

Capability of the kit will vary depending on chemical contamination density and volume of the area, and chemical compound.

1 Utilize the FAST-ACT® 4-Kg Pressurized Cylinder to perform operational, emergency and/or technical decontamination by following the device user manual in contaminated air spaces.

2 Utilize the FAST-ACT® wand (if equipped) or hose to apply additional FAST-ACT sorbent powder to contaminated horizontal surfaces.

3 Dispose of FAST-ACT® sorbent powder in accordance with local requirements.

* Treatment volume is highly dependent upon chemical and contamination density. Example is for 1000 ppm of HCl.
